- Simplified Plans

Enterprise SIP Solutions

Advance your communications for less.

Take your communications to the next level with SIP solutions that provide advanced technology at a savings. PowerNet Global offers a variety of SIP packages that are sure to accommodate any need your customer may have.

Our SIP solutions supply Voice over IP (VoIP) and Internet Access (customers can choose whether to use their own Internet Access or take advantage of cable Internet Access or a dedicated connection through PNG) through one connection, providing customers with an affordable voice/data solution that offers all the telecom advantages necessary for today's market. Our packages can offer inbound toll-free, outbound long distance, local service, and any combination of these to meet the unique needs of your customer.

Why SIP vs. TDM?

SIP is in high demand in the marketplace because it's a truly integrated solution that offers more feature-rich services and typically for less than traditional TDM services. SIP also provides versatility that allows your customer to buy only what they need rather than just what a carrier offers, as well as the ability to bring their own bandwidth.*

*Availability limited to certain areas. Contact your Account Manager for details.

Why PowerNet Global?

You don't need to be an expert on SIP technology to sell PowerNet Global's SIP Solutions. Simply call your Account Manager and they will work with you to determine the best SIP solution to accommodate your customer's needs. And because PNG has a variety of SIP packages available, we'll be able to customize the service to your customer's specific needs.

PowerNet Global blends high-quality communication services with unmatched support so that you're free to go about your business and leave the details to us.
