## VERSATRUNK SIP TRUNKING

VersaTrunk SIP Trunking service is a great solution for small to medium size businesses that want the telecom advantages of a larger business without the higher price tag.

The service is very comparable to traditional Integrated Access but at a lower cost and with more versatility. VersaTrunk SIP Trunking provides inbound and outbound local and long distance calling as well as Internet access up to T-1 bandwidth.

### PACKAGE INCLUDES:

- Six SIP Trunk lines
- Data T-1 (Private Line available for additional charge)
- 24,000 local minutes
- 1,500 long distance minutes
- Additional SIP Lines with 500 LD minutes are available

What distinguishes VersaTrunk from Integrated Access is its unique ability to allocate the bandwidth between voice service and Internet Access. The allocation occurs dynamically and transparently to the customer while the flexibility of VersaTrunk allows them to prioritize the bandwidth to meet the needs of their business.
