

VERIZON SIP GATEWAY

VERIZON SIP GATEWAY

Verizon's SIP Gateway provides large-volume customers with an easy method for transporting SIP-originated voice traffic over Verizon's IP network for smooth call completion.

Calls are passed securely over the public Internet or a dedicated connection to Verizon's network and converted to TDM for termination over the public switched telephone network (PSTN).

KEY FEATURES:

- Ideal for high traffic volume customers
- Reliability of Verizon's network
- Flexible interface options
- No loop MRCs associated with service
- 24x7 NOC support

With flexible interface options and low per-minute rates, this service allows customers to control their operating expenses as they continue to grow their businesses.
