

# PNG MPLS SOLUTIONS

## MPLS SERVICE

Multi-Protocol Label Switching (MPLS) is an IP VPN technology that is quickly replacing legacy frame and ATM networks. Unlike traditional hub-and-spoke designs, an MPLS network is a fully meshed, secure, private network that allows for any-to-any connectivity.

The MPLS service provided by PowerNet Global offers a secure Wide Area Network (WAN) environment with a variety of bandwidth increments at multiple locations to meet the unique needs of every size business.

## KEY FEATURES:

- A private and secure solution separate from the public Internet
- Ability to transport IP packets as well as other traffic types like native ATM, SONET, and Ethernet frames
- Scalable bandwidths with easy migration from legacy delivery methods
- Deterministic QoS options to better support voice and video traffic
- 24x7 NOC Support

PNG's MPLS services are expertly engineered to provide industry-leading network reliability, quality, and scalability to consistently deliver the performance that businesses demand.
